### C-8 hearing comments

Our comment is C-8 has no business in the drinking water of the local communitys in Ohio. It is a violation of our bodies and the danger of the contaminant to the residents is being determined by the pollutants maker Dupont in the local media.

There are many questions concerning C-8 in the Ohio communitys who have finally almost two decades later have been told C-8 is in their water. Why weren't we told in 1984 that we were drinking a chemical pollutant that is unregulated and possibly dangerous? Some studies have shown a possible danger to women and children. This especially concerns us because we have been thinking of starting a family. In closing I hope the U.S.EPA will take into account the communitys rights to know and choose what they consume.

Since Dupont believes we have no rights.

CONTAIN NO CBI Sincerely  
Mr. and Mrs Timothy Amick
